

Mitchell1[®] Manager/ManagerPlus

Activant Electronic Parts Ordering Installation

Requirements

The computer system requirements for the Mitchell 1 Manager System and Activant are the same as when using any other electronic catalog. Ideally the shop should be using Windows 2000 or XP and the network must be connected to the Internet. The Internet connection should be a broadband connection.

Medium

The Activant catalog is entirely Web based and requires no installation; the catalog provides connectivity to Alliance members.

Functionality

Provides fast part lookups using category/subcategory, job lists, part number, description lookup, and keyword searches.

Credentials

Where do I get the necessary credentials to configure the Activant catalog? There are five pieces of information required when configuring the vendor link information as displayed in Fig. 1. These credentials can be provided by your vendor:

1. Vendor Name – This will be provided by your vendor (or distributor).
2. Seller ID – This is the Seller ID of the distributor's store location. This number will be provided by your vendor (or distributor).
3. User Name – This is the user name that the vendor (or distributor) creates for your account. [note: most installers who use Mitchell 1 have never seen the Web site and/or don't know how to get to them.]
4. User Password – This is the password that the vendor (or distributor) creates for your account.
5. Group Name – This is assigned by IAP and will be provided by your vendor (distributor).
