

Fix Inaccurate Avg Part Cost

Article Number: 154 | Rating: Unrated | Last Updated: Thu, Feb 26, 2015 at 12:08 PM

You need to take the item down to ZERO QOH so that it is forced to start calculating Avg Cost all over again.

1. Go to Inventory List screen, enter the part number and click Search.

2. With the selected part highlighted, click on **Edit** to open the inventory item. Make note of the current QOH (Quantity On Hand). 3. Change the On Hand quantity down to 0 [zero] and then click **OK** to save this change. (you can skip through the manual change warning) 4. Click on **Edit** to open the same part item again; change the On Hand back to the previous figure and click **OK**. (skip the manual change warning again)

As long as the QOH remains above zero, the average cost will continue to calculate.
