

Registry error setting up Activant, FirstCall or eStore catalog

Article Number: 158 | Rating: Unrated | Last Updated: Mon, Jul 20, 2015 at 11:18 AM

Attempting to link a Vendor record to FirstCall, Activant or eStore throw an error "Vendor Code could not be save to registry". Â This error is also possible after a vendor has been successfully installed; the user may receive this error when attempting to order parts.

This is easily fixed by importing the needed registry setting. To import this setting download <http://m1faqs.com/fix/mitchell.reg> to your desktop and double click on the file.

If you are using ShopKey5 and are having the same issue, download <http://m1faqs.com/fix/Shopkey.reg> to your desktop and double click on the file.
