

"Main dictionary not found" Error Performing Spellcheck

Article Number: 27 | Rating: Unrated | Last Updated: Fri, Sep 27, 2013 at 4:42 PM

Solution 1: Go to <http://www.managerfiles.com> and run item #19 (number subject to change) - the **vspell.exe**. Please note that shop mgmt program should be closed before running it. The file is also attached to this article.

-
Solution 2: Rename Vspell32.dll, Vspell32.ocx and vspeller.hlp to Vspell32.old, Vspell32.old and vspeller.old.

Then copy Vspell32.dll, Vspell32.ocx and vspeller.hlp from the Management install CD to the C:\Windows\system32 directory. Uncheck 'read-only' box and checked archive on each file. Then restart the computer, run spellcheck and it should now report "Spell check complete". NOTE: If the field fix doesn't work it will be necessary to re-install Manager as shown below OR call tech support (888-724-6742).

Solution 3: Rename Vspell32.dll, Vspell32.ocx and vspeller.hlp to Vspell32.old, Vspell32.old and vspeller.old.

Then reinstall Manager to write a fresh copy of spellcheck.
