**Delivering the value of RPs at the point of need – only through TruckSeries**

For five decades, the ATA's Technology & Maintenance Council (TMC) has provided unparalleled technology and maintenance guidance to the commercial trucking industry through its *Recommended Practices* (RP) manuals.

Today, this comprehensive resource includes over 500 voluntary technical standards covering maintenance, testing and specifications for a full range of vehicle systems, including electrical, tire & wheel, engines, chassis and brake systems.

## Now available in TruckSeries!

**NEW!** For the first time, truck repair shops can instantly access the information they need through Mitchell 1's TruckSeries diagnostic and repair software suite. The content was merged into TruckSeries under a licensing agreement with TMC.

Through a single log-in TruckSeries, technicians can access all the information they need to diagnose and complete repairs for any year and make of medium- and heavy-duty trucks. Users can quickly identify and reference the appropriate RPs for any given job via the program's 1Search Plus card-based format or through the Service Manual view. Once a vehicle is selected in TruckSeries and a component is identified, the 1Search Plus view will include an index card for "Recommended Practices," which lists RP's that are associated with the vehicle and component.

## Major benefits of online accessibility:

- ▶ Makes it easier than ever for technicians to find specific information with a single search.
- ▶ Improves shop efficiency and productivity: That's what Mitchell 1 is all about!
- ▶ Facilitates a broader adoption of industry best practices to help ensure accurate, quality repairs.
